Interaction Patterns

- ⚙ Target-Action
- ⚙ Delegation
- ⚙ Command Pattern
- ⚙ Notifications
- ⚙ Key-Value Observation

Target-Action

```
button.addTarget(self, action: "handleTap:",  
                 forControlEvents: .TouchUpInside)
```

```
func handleTap(sender: UIButton) {  
    print("You tapped the button!")  
}
```

UIControl

```
public class UIControl : UIView {  
    //...  
    public func addTarget(target: AnyObject?, action: Selector,  
                           forControlEvents controlEvents: UIControlEvents)  
    public func removeTarget(target: AnyObject?, action: Selector,  
                              forControlEvents controlEvents: UIControlEvents)  
  
    //...  
  
    public func sendAction(action: Selector, to target: AnyObject?,  
                            forEvent event: UIEvent?)  
    public func sendActionsForControlEvents(controlEvents: UIControlEvents)  
}
```

It's Challenge Time!
